

Thank you for your commitment to working with CARQUEST to enable your company to support electronic special ordering through the CARQUEST Vision system. CARQUEST is excited about partnering with your company in this endeavor and we look forward to the benefits this project will provide both our organizations. We provide several options to set up your company to interface with the Vision system to allow you to tailor the solution to work with your system capabilities.

Because CARQUEST Vision complies with AAIA Internet Parts Ordering (IPO) standards, implementing this IPO solution positions your company to use the Internet for parts ordering with any of your customers that implement a web-based IPO-compliant application to automate the special order process.

The following is an overview of the steps that our companies must respect to successfully implement CARQUEST Vision IPO special ordering:

1. Complete the "Partner with CARQUEST" contact form on this website (vision.carquest.com). We will then email a user name and password to your business and IT contacts.
2. The user name and password allows your company access to the secure level of the website and the technical information necessary to develop an understanding of the Vision system to be able to evaluate the various system configuration options to best fit with your company's IT and business processes.
3. Our CARQUEST Vision enablement and support team will contact your business and implementation team for an initial consultation. During this initial consultation, we will present the various options available to your company to enable Vision special ordering including the CARQUEST developed turnkey software package, VisionDirect, or the VisionQuik remotely hosted solution.
4. After you have selected the option that works best for your company, the CARQUEST Vision team will work with you through the enablement process to assist in the setup of your system and coordination with our CARQUEST business team to ensure that the system is ready to maximize the benefits of electronic special ordering.

Our experience indicates that, once the commitment is made to move forward and the process started, your company can be in LIVE production status and receiving orders through the Vision system in as little as four to six weeks.

Thank you again for your support. We strongly believe that this initiative has far reaching consequences for both our companies. It will set us on a pathway for efficient and effective communications, which will augment our respective service levels and reduce cost; an outcome we both desire.
